

PARTNERSHIP WITH COMPRESSPORT AUSTRALIA

I am pleased to confirm that I have confirmed a new and exciting business partnership with **Compressport Australia** www.compressport.com.au

Many of you are no doubt aware of the increasing number of athletes in running and multisports using compression garments for recovery, training and competition. **Compressport** is a specific veno-muscular compression garment for the calf that originates in France and has now arrived in Australia.

I was first exposed to the **Compressport** product in France and the specificity of the compression and focus on product quality means that I can stand by the product as an elite athlete and as a qualified health professional.

Personally, I have been using veno-muscular for 18 months and have benefited from the product through:

1. Facilitating and assisting recovery from a chronic calf complaint
2. Reduced Post Competition and Post Training Soreness
Faster Recovery = Better Training and Faster Racing
3. Prevention of Re-Injury in Lower Limb

As well as using and endorsing the product in training and competition, the product will also be sold in WA through both Front Runner Sports Management and The Body Station Physiotherapy.

We will shortly be launching a special introductory offer on Compressport products in WA.

I would like to thank Rudi and Compressport Australia and very much look forward to a mutually successful partnership.

Running Regards
